Introduction: Aims and Objectives

The WUN Global GIS Academy's 2007 seminar series is intended to reflect this growing importance of public participation GIS. As usual it will enable participants to access contributions from some of the best-known names in the field, but in addition we hope and expect that provision of an international dimension to the discussions will add greatly to the experience.

Following the seminar series should enable participants to:

- follow current literature in the field;
- compare and contrast participatory GIS, public participation GIS, Internet GIS and Web GIS information technologies;
- understand the interplay between GIScience and GISystems research;
- understand the advantages and disadvantages of different research approaches for assessing PPGIS use.

Who can participate

The seminar is open to faculty and students in universities that are part of the WUN, together with members of the Quantitative Methods Research and GIScience Groups of the Royal Geographical Society (with IBG) and other interested parties. Although the series carries no activities for which a formal assessment is appropriate, our hope is that graduate student classes, in particular, will build on it by creating some formal, assessed activity that enables the series to be ‘hard wired’ into their research training programmes. Possible activities might be completion of an individual essay based on some or all of the presented materials,
A note giving seminar synopses, suggested reading, and possible student activities, is available by request from Dave Unwin (d.unwin@wun.ac.uk).

Seminar Environment

Building on its successful use in our 2005 and 2006 seminar series, the seminars will use the Marratech™ platform, which is an extended desk top video and audio-conferencing environment (see www.marratech.com for details). This platform enables a moderately sized client to be downloaded and used with Windows™, Linux and Mac-OS™ systems. Provided broadband access is available, participants can use this system with a simple headset/webcam from home, or via a pre-arranged video suite at the home university, which is what we would recommend for entire classes of graduate students. If you intend to set up such a suite, please note that institutional firewalls can generate problems in using the client, but these are not insurmountable.

List of dates & topics

All seminars will commence at 1600 UK time, initially BST then GMT. Please check carefully that you have the correct local time.

To view the seminars in real-time and participate

On the day of the seminar, from 3.45pm (UK local time), to launch and enter the Marratech™ virtual seminar room please go to http://www.wun.ac.uk/ggisa/seminars.html.

The seminars commence at 4pm UK local time. Full instructions on how to access them are also available at the website http://www.wun.ac.uk/ggisa/seminars.html.

We strongly recommend that you ‘enter’ the virtual seminar room in good time for the advertised start.

The archive

The 2005 seminars, on Hot Topics in GISc and the 2006 seminars on Spatio-temporal modeling in GISc have been archived at the WUN GGISA website:

http://www.wun.ac.uk/ggisa/seminars/archive/

The precise form of any one session archive depends upon what we were able to acquire, ranging from PowerPoint™ or PDF files of the materials used through to complete recordings of the session that can be viewed off line using the Marratech™ client. Instructions on how to do this are on the same website.

Dave Unwin (WUN)
Tim Nyerges (University of Washington)
